

Current state of live data economy

MARTIN MORAVEK – SOLUTIONS ARCHITECT, STREAMR

Smart city data silos

VEHICLE SENSOR
DATA

SMART BUILDINGS

ENVIRONMENT DATA

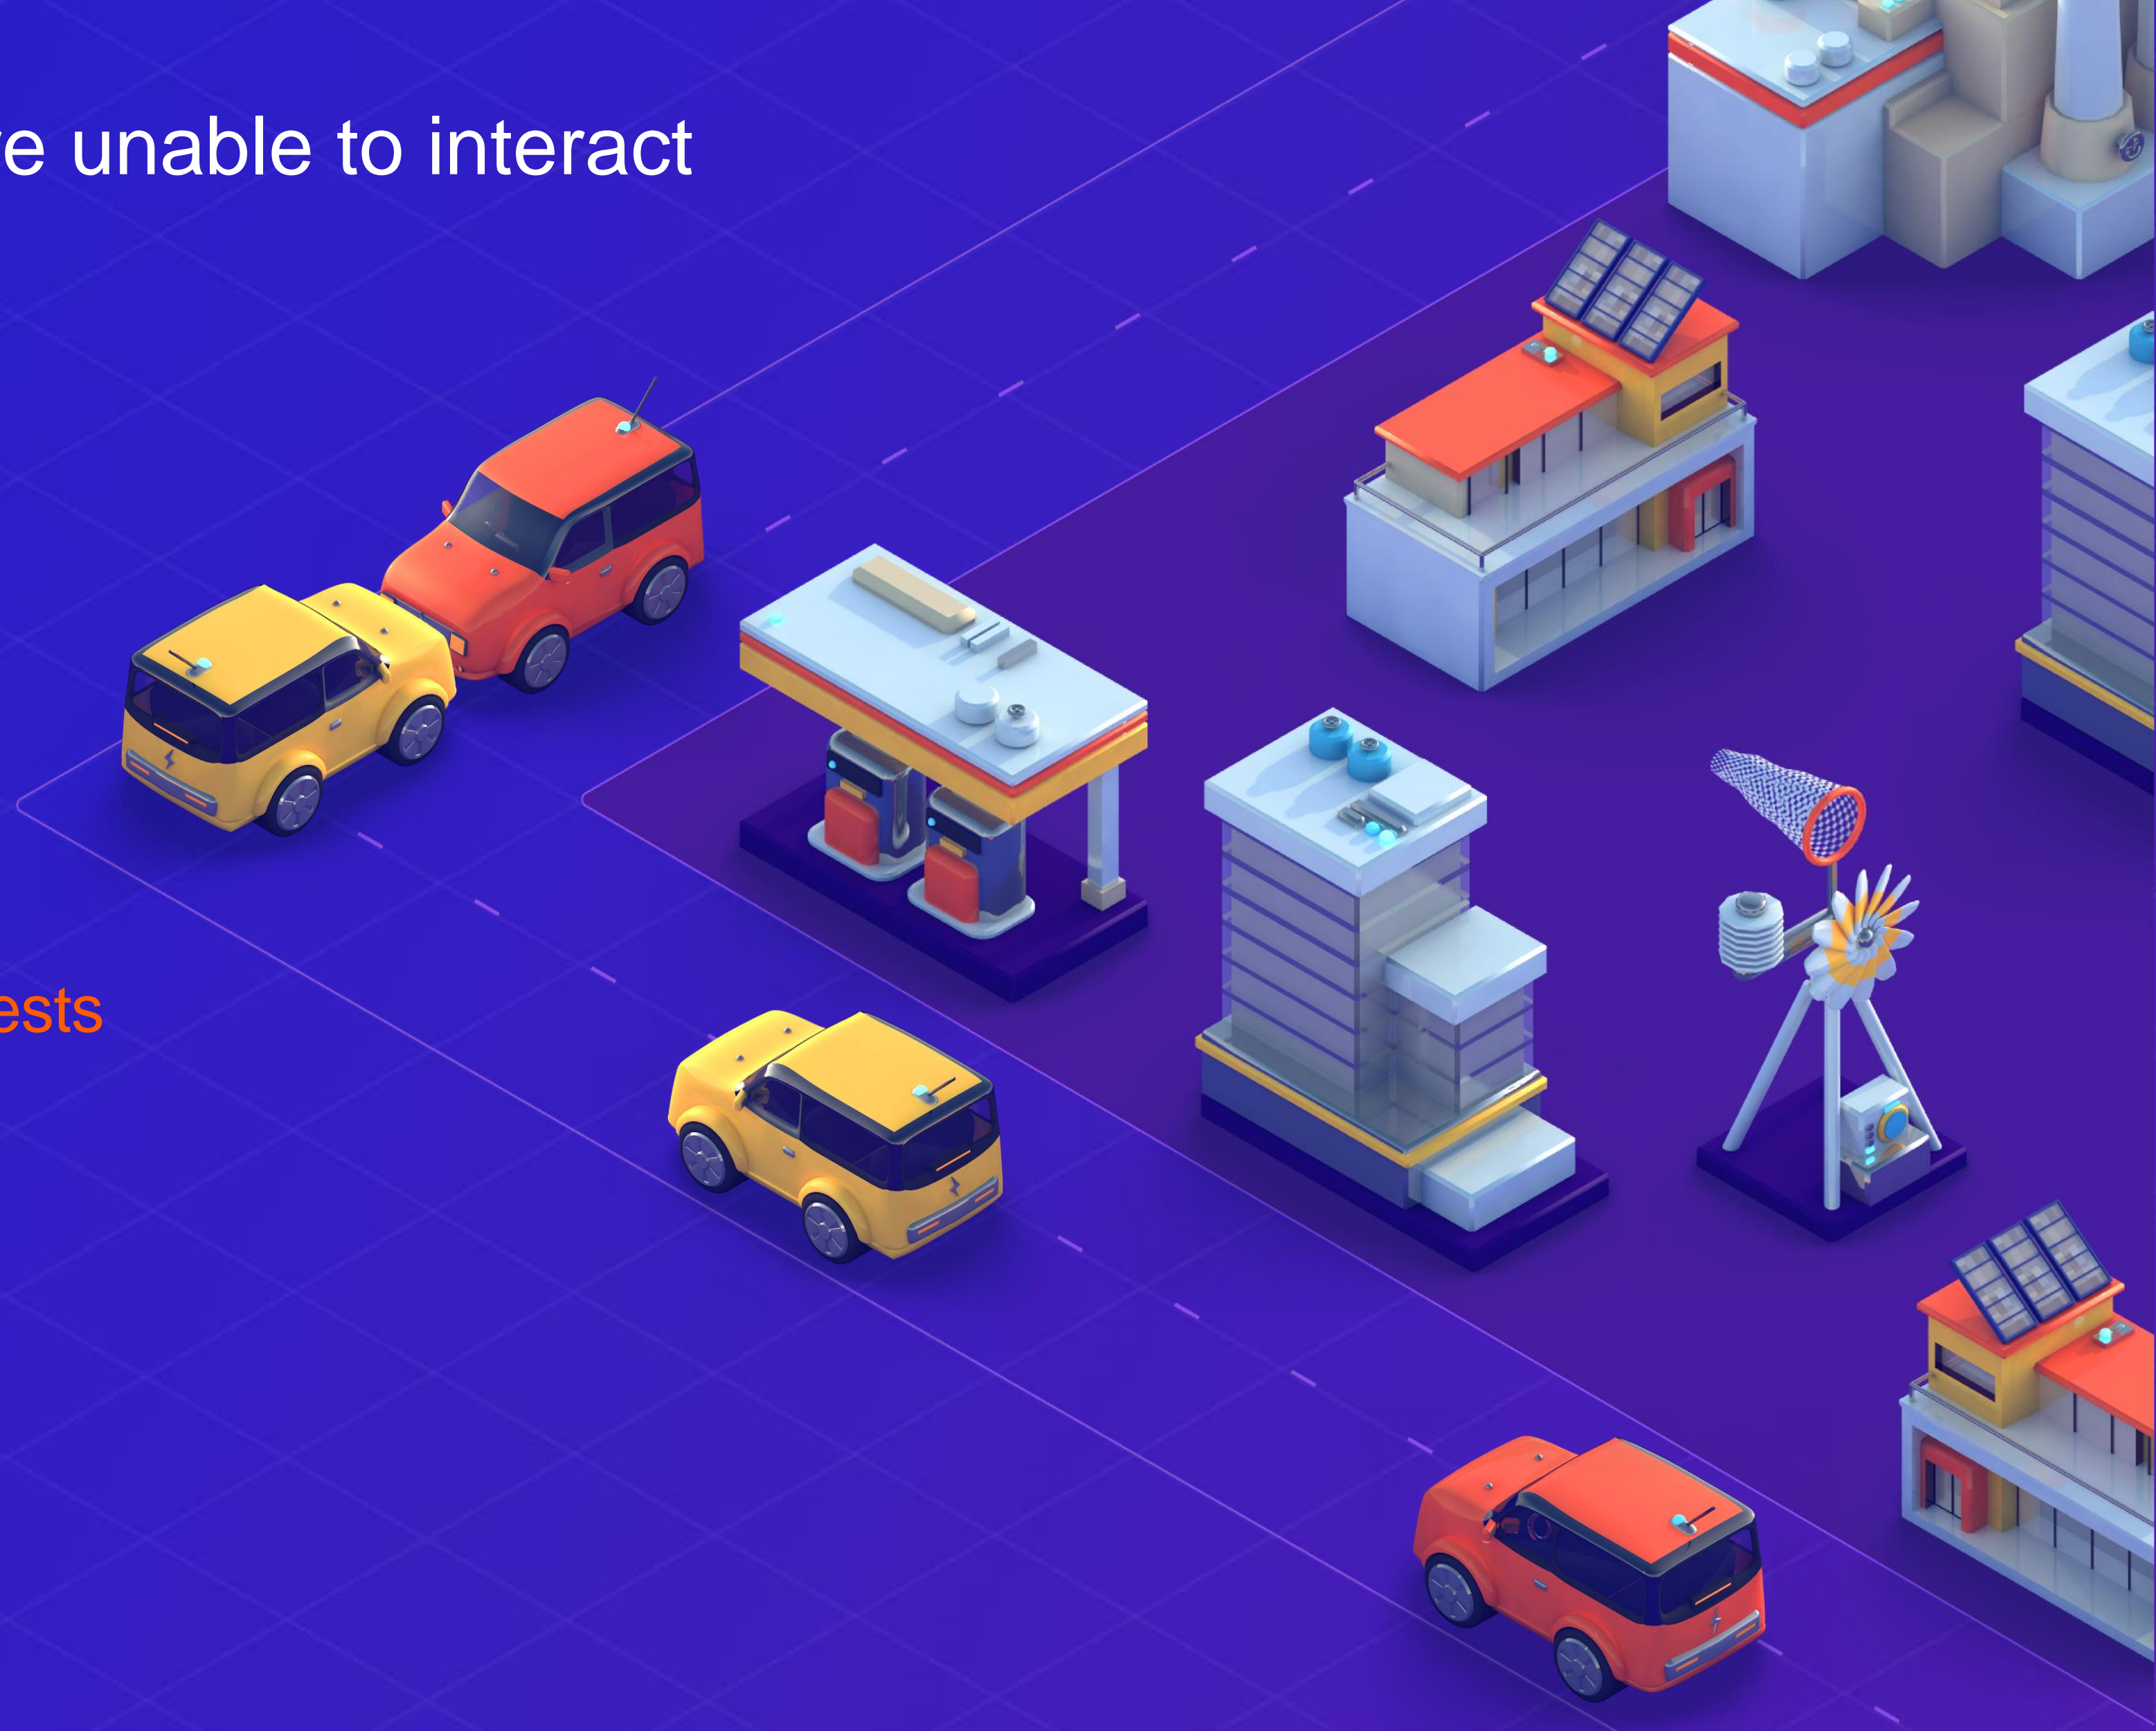

Better access to data will lead not only to safer roads but also higher quality of life and economic growth

Multiple data sources that are unable to interact

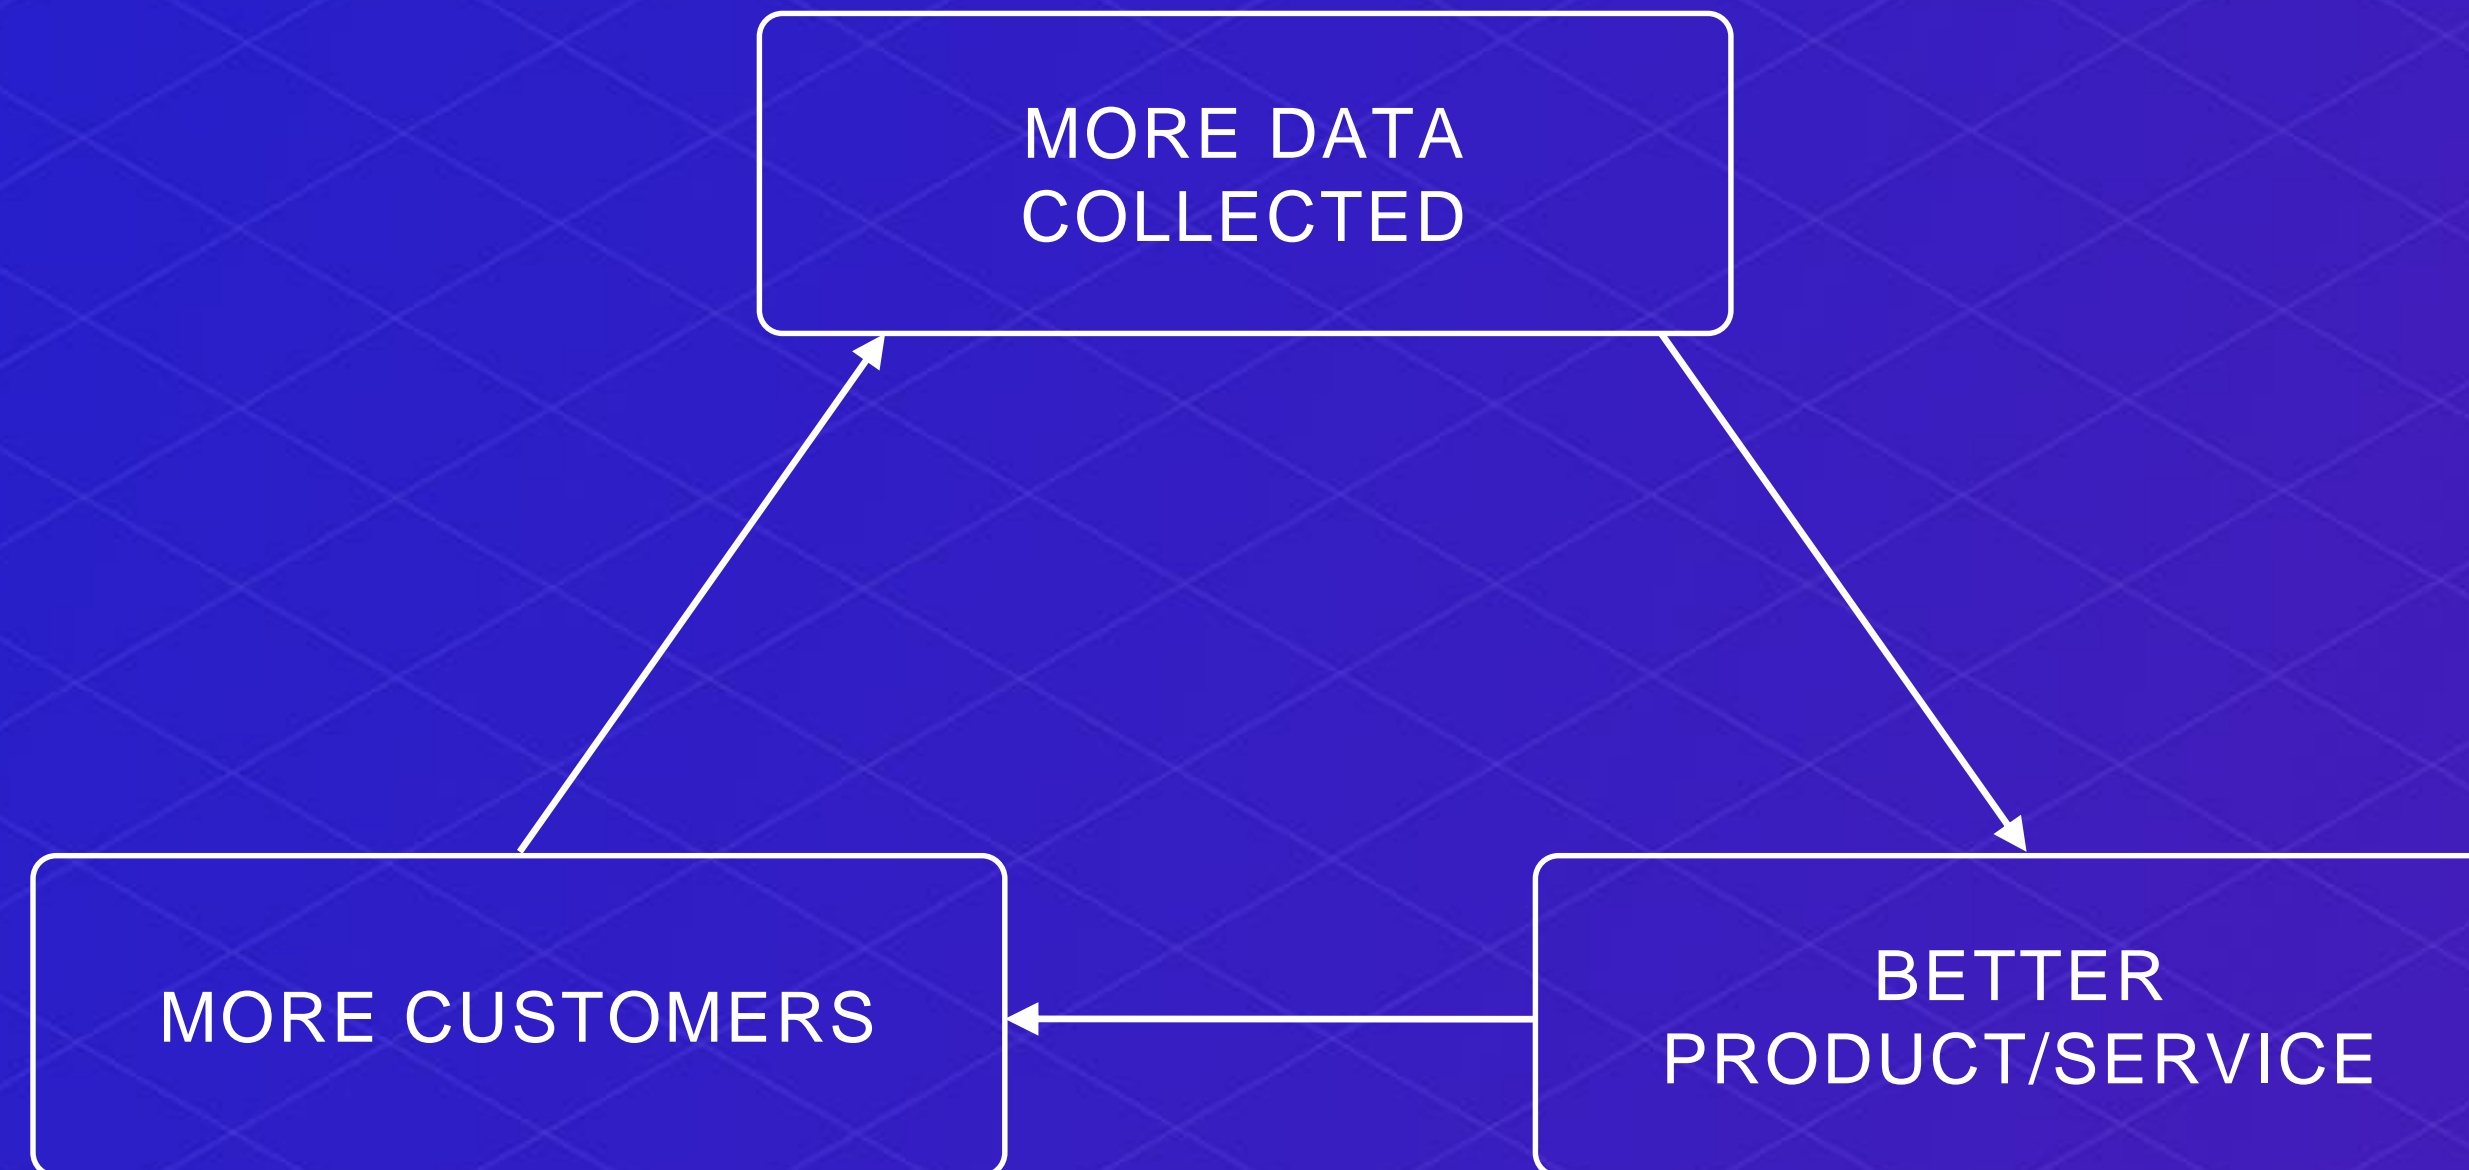

- Vehicle data
Speed | Acceleration | Braking
- User data from smart devices
Location | Browsing history | Interests
- Smart parking data
Availability | Price
- Environment data
Air Quality | Pollution levels

There is an inadequate data infrastructure to connect all of these data points – data silos, vendor lock-in, no open eco-system and interoperability

Data availability and economic growth

Data enables both development of new products/services/business models as well as improvement of existing ones

Why live data?

- Data has the highest value in the beginning
- Value of data decreases over time

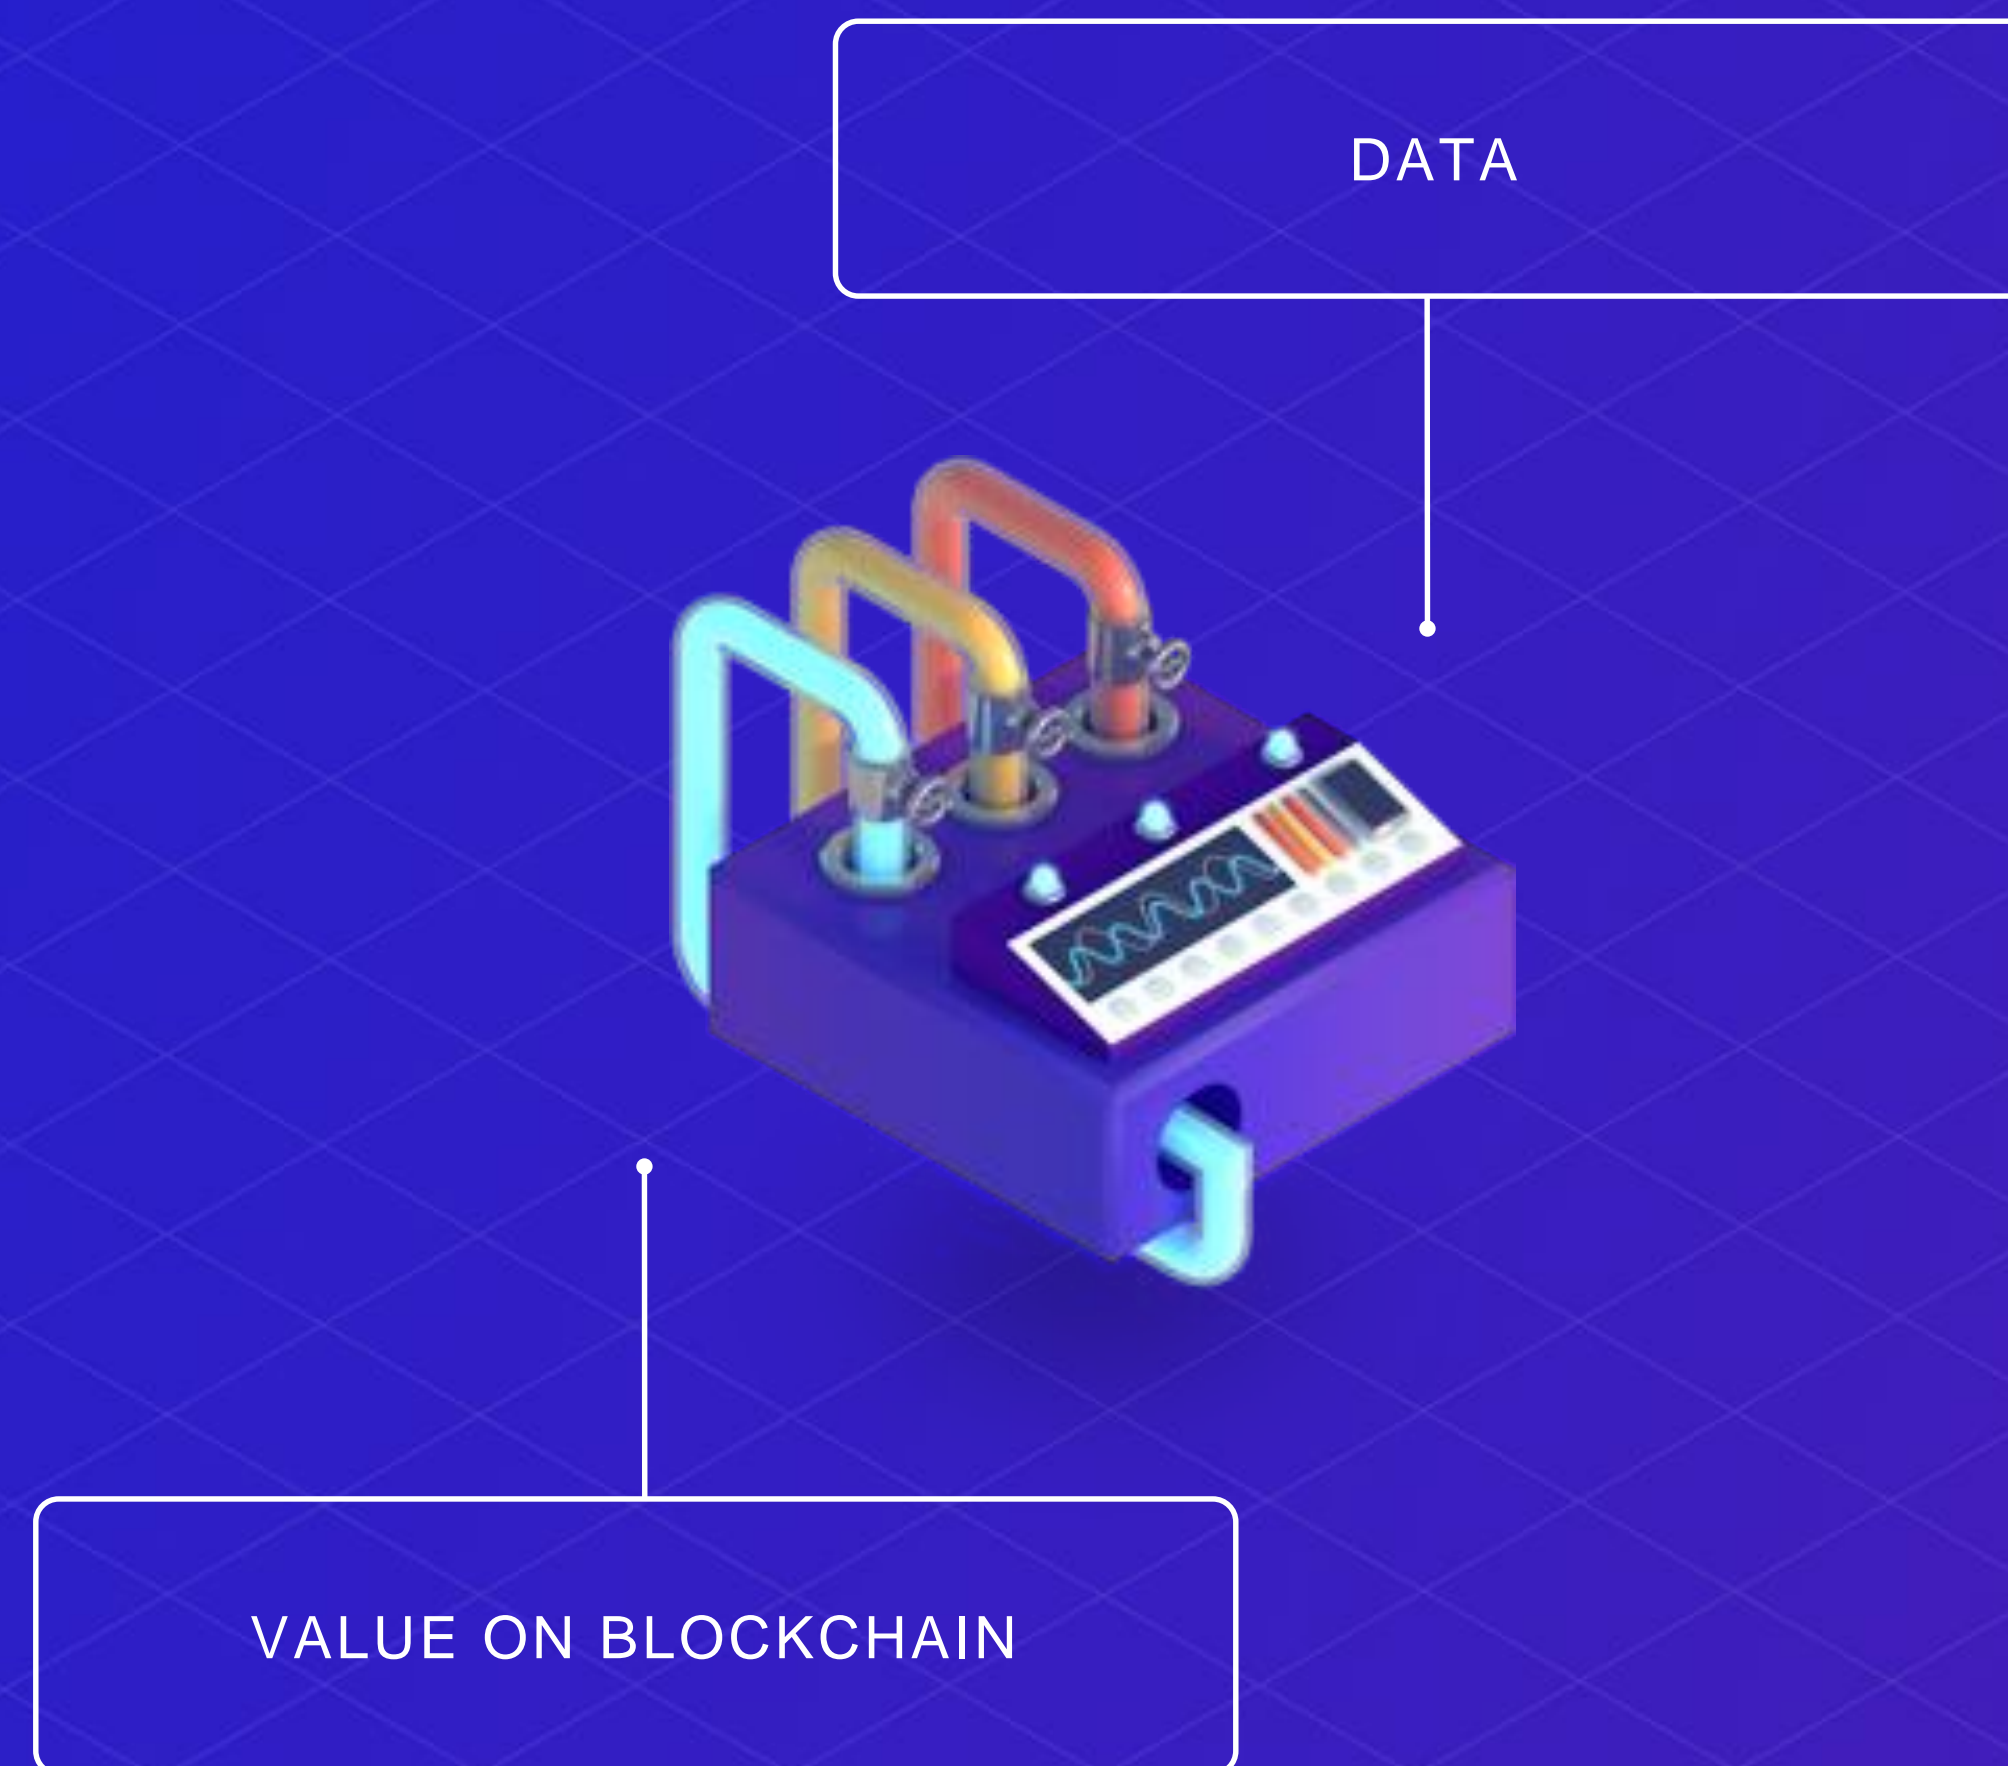

Beginning of Internet – Lessons learned

- Computers in separated intranets
- Intranets not interconnected
- Neutral and interoperable protocols had to be developed

Live data ecosystem

Data globally available in open and secure way.

Solution: The Streamr Network

- Decentralised, peer to peer
- Pub/Sub
- Resilient
- Low latency
- Scale
- Open ecosystem
- Less prone to cyber attacks

The Streamr Network can act as the real-time data delivery pipeline, connecting IoT devices, data providers, users and data buyers.

Machine Witness Use Case Architecture

Streamr nodes operating in vehicles

- The car has the option to utilise its unused resources (CPU and bandwidth) to support the Streamr network. Node runners are also incentivised by a fee from every transaction – this is an additional monetisation for driver.
- When EV is parked and charging all its computing resources are unused. These do not have to remain wasted and can instead be monetised.

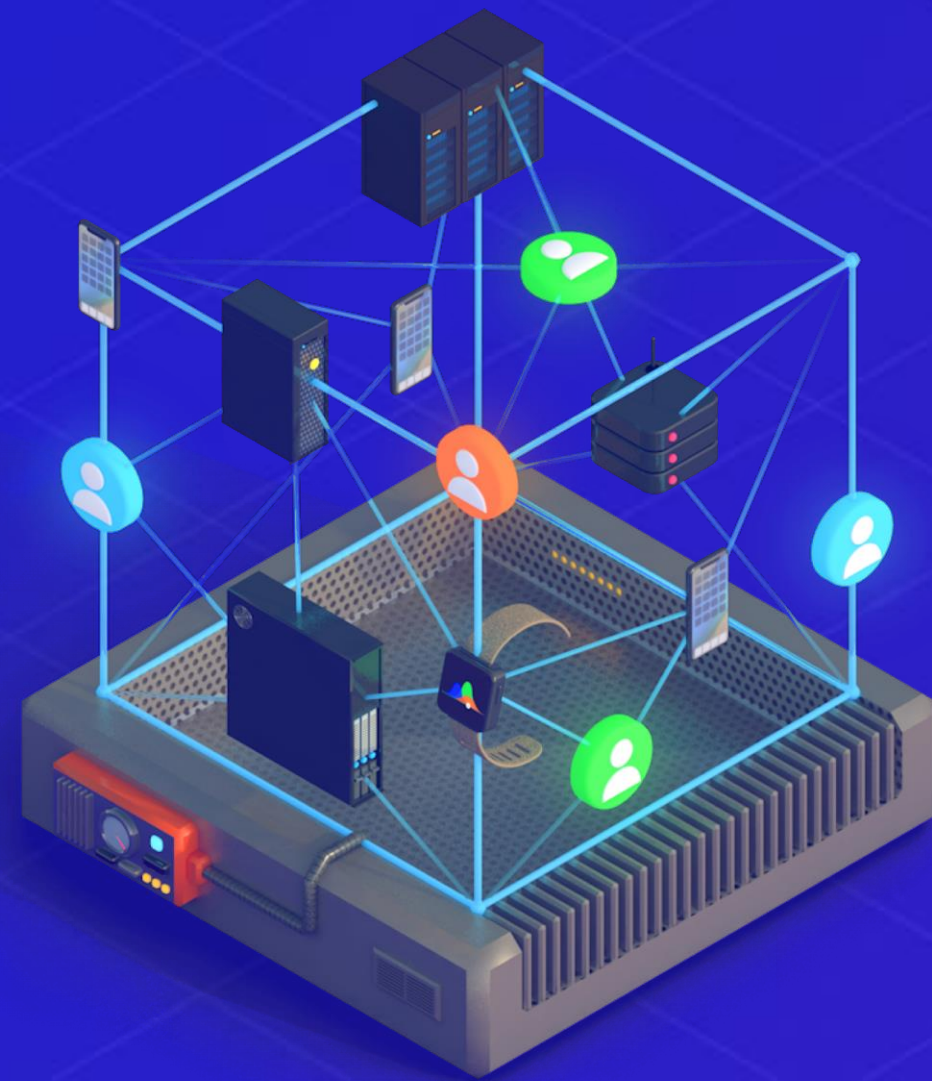

User data monetization

Blockchain

Launched May 2018

First person selling his data in 2000

- Infrastructure was missing

Has the infrastructure improved since then?

Limit Maintenance

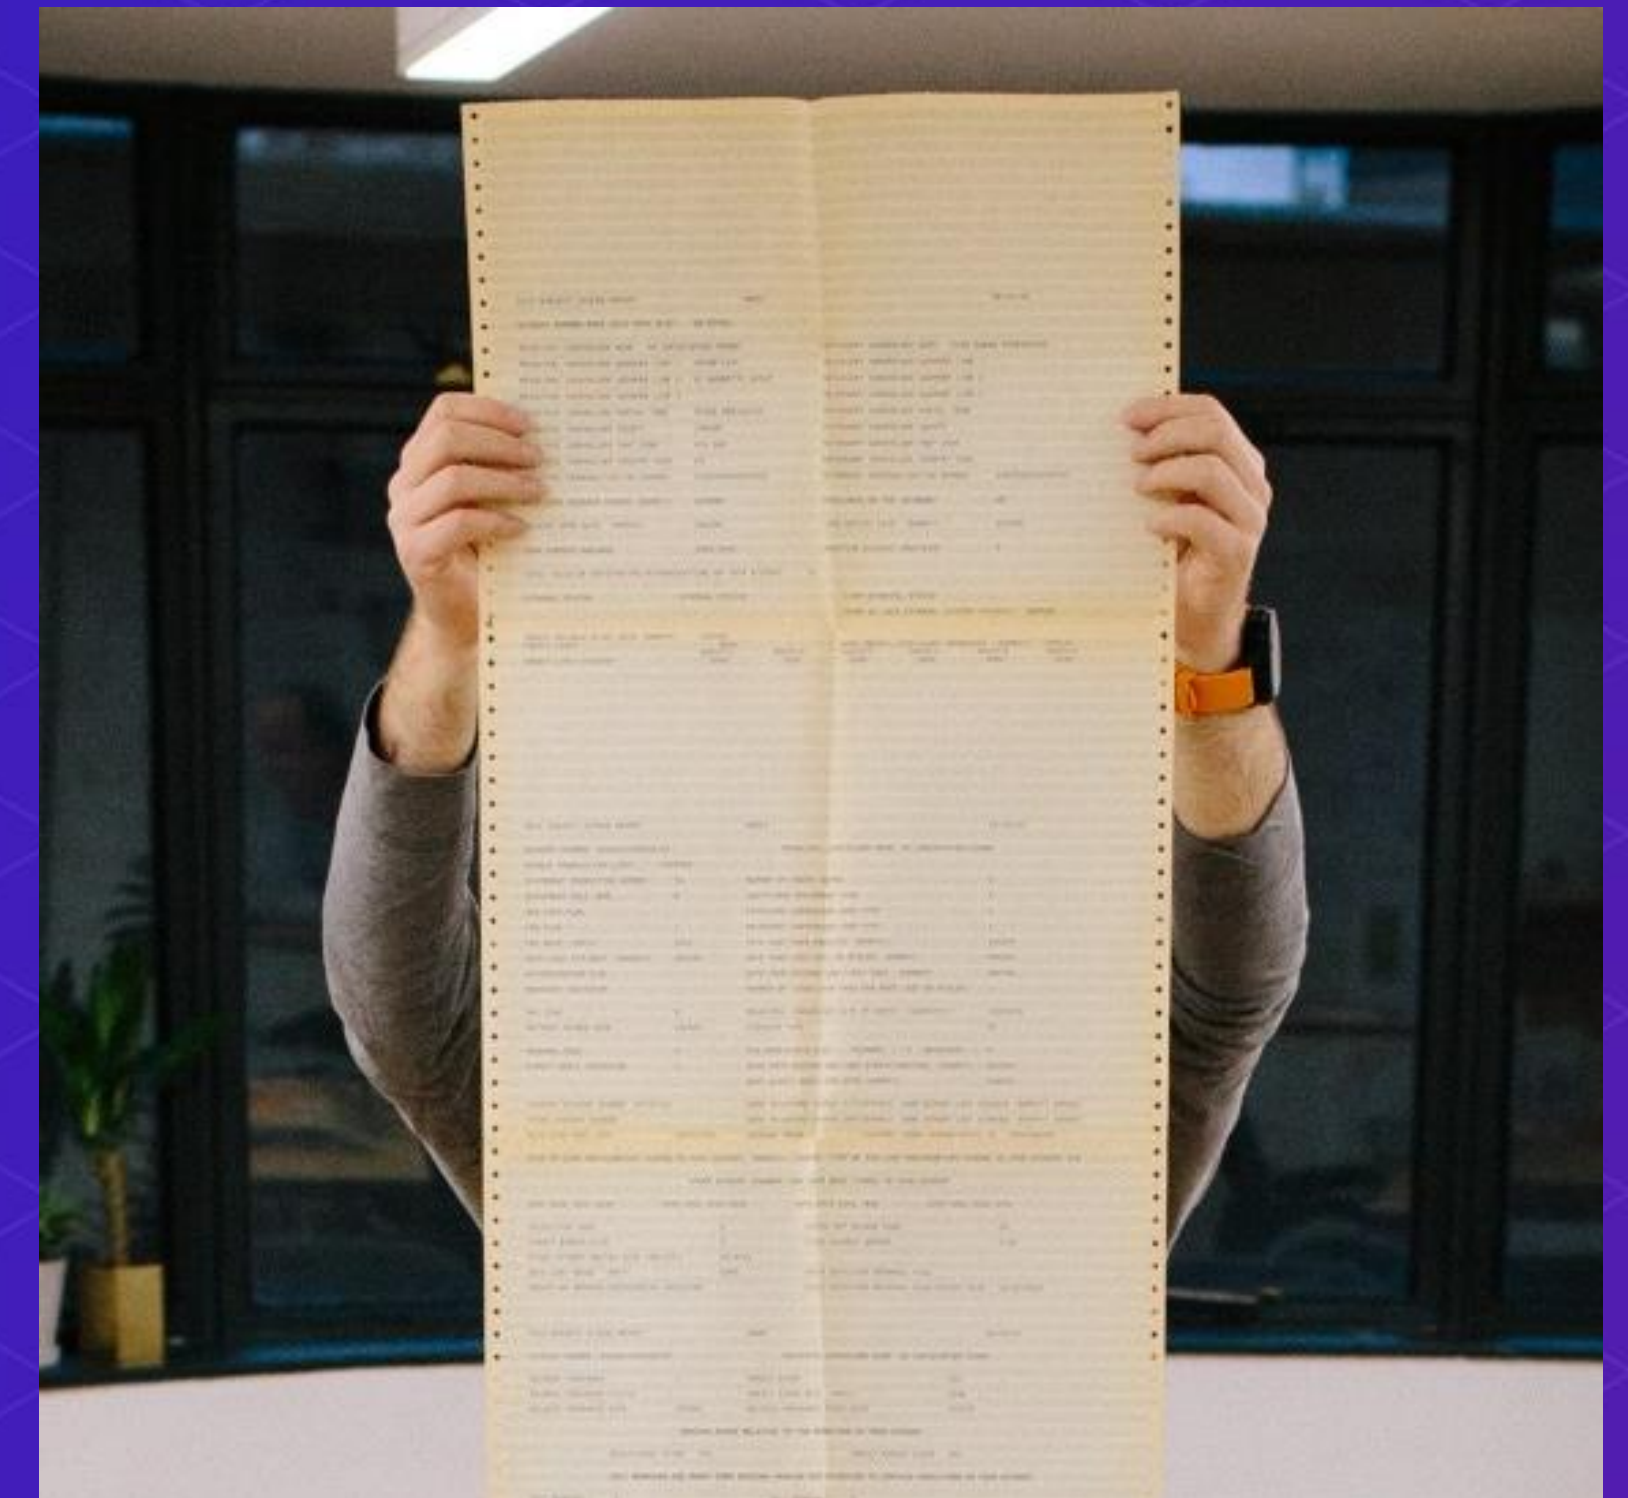

This is the data held for the overdraft limits that have been set up on the current account.
There is a separate sheet for each limit arranged. The screens cannot be printed.

Limit Details

Three key elements

- Users wanting to monetise their data
- Companies in need of user data
- Missing infrastructure for user data monetisation

User data market – connection from user to buyer was missing

We solved it, with Data Unions

- Data Unions allow users to crowdsell their data
- People easily bundle and sell their real-time data and earn revenue
- Companies can develop a Data Union integration for their users and share the revenue from sold data
- Data buyers can buy data from many users at once – in unified quality and format

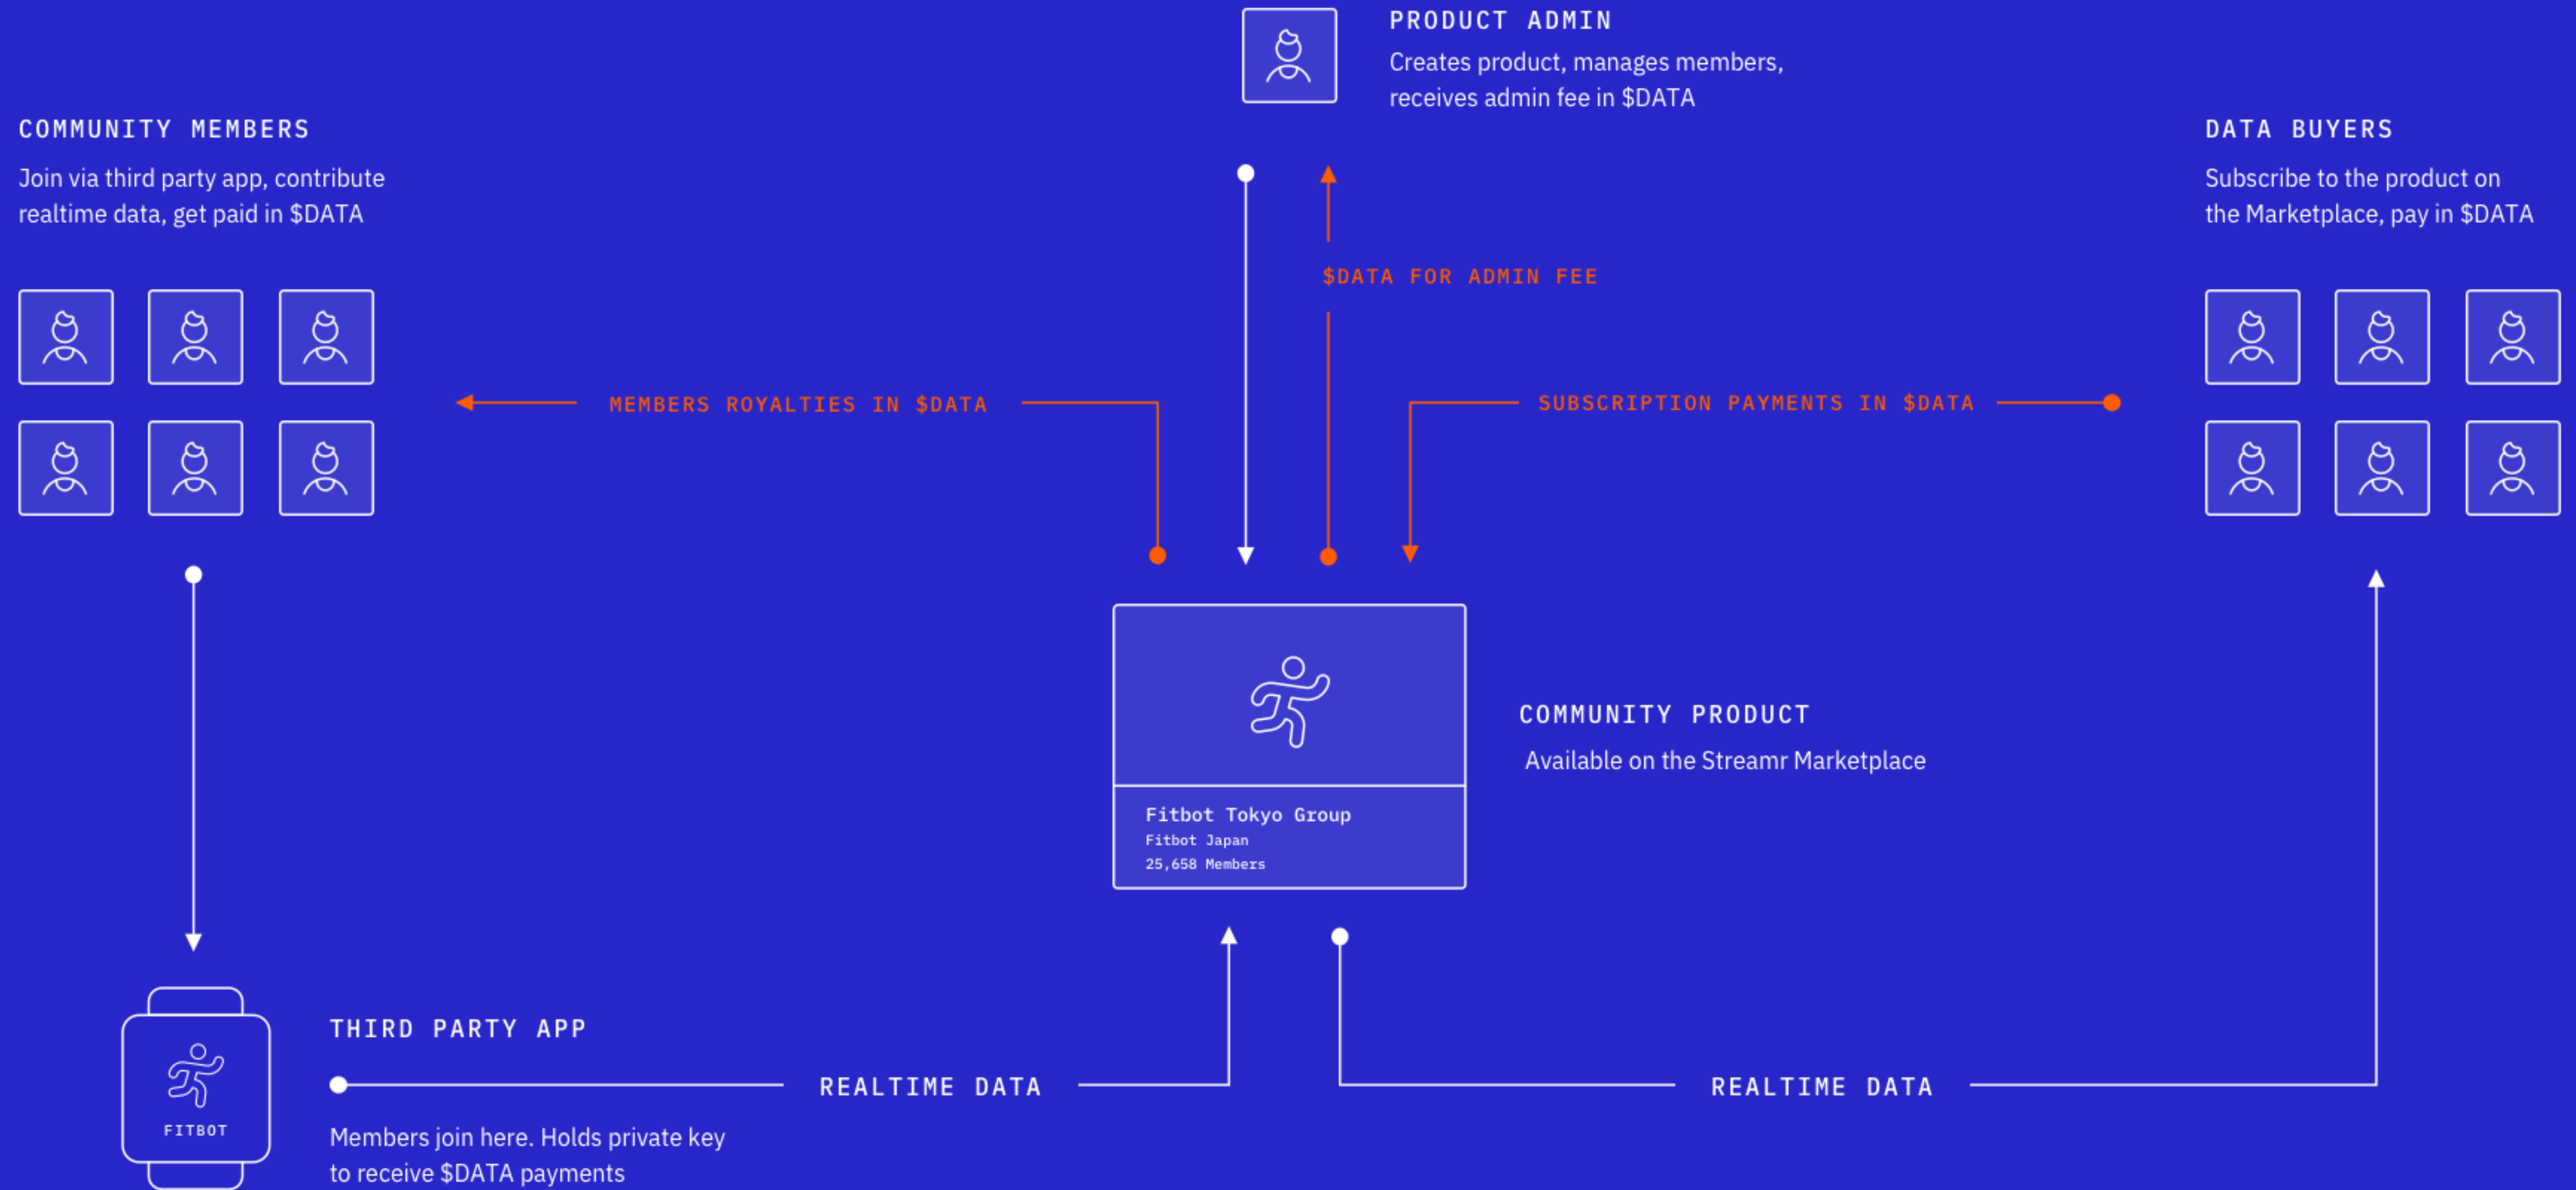

Data crowdsourcing via Data Union

Data Union Reference – Fitness Data

Data Union roles for businesses

DATA BUYER CROWDSOURCING DATA

- Buy data from an existing Data Union
- Buy data from a new Data Union
- Use data for your products and services

DATA UNION ADMIN

- Develop integration
- Enable your customer to unlock value of their data
- Share revenue
- Scale your data economy
- Make customers stick with your product

Data Unions helps companies monetise data of their users

User Data Monetisation

BEFORE DATA UNIONS

- No infrastructure ❌
- Limited reach and revenue from data ❌
- Common not so fair data monetisation ❌

WITH DATA UNIONS

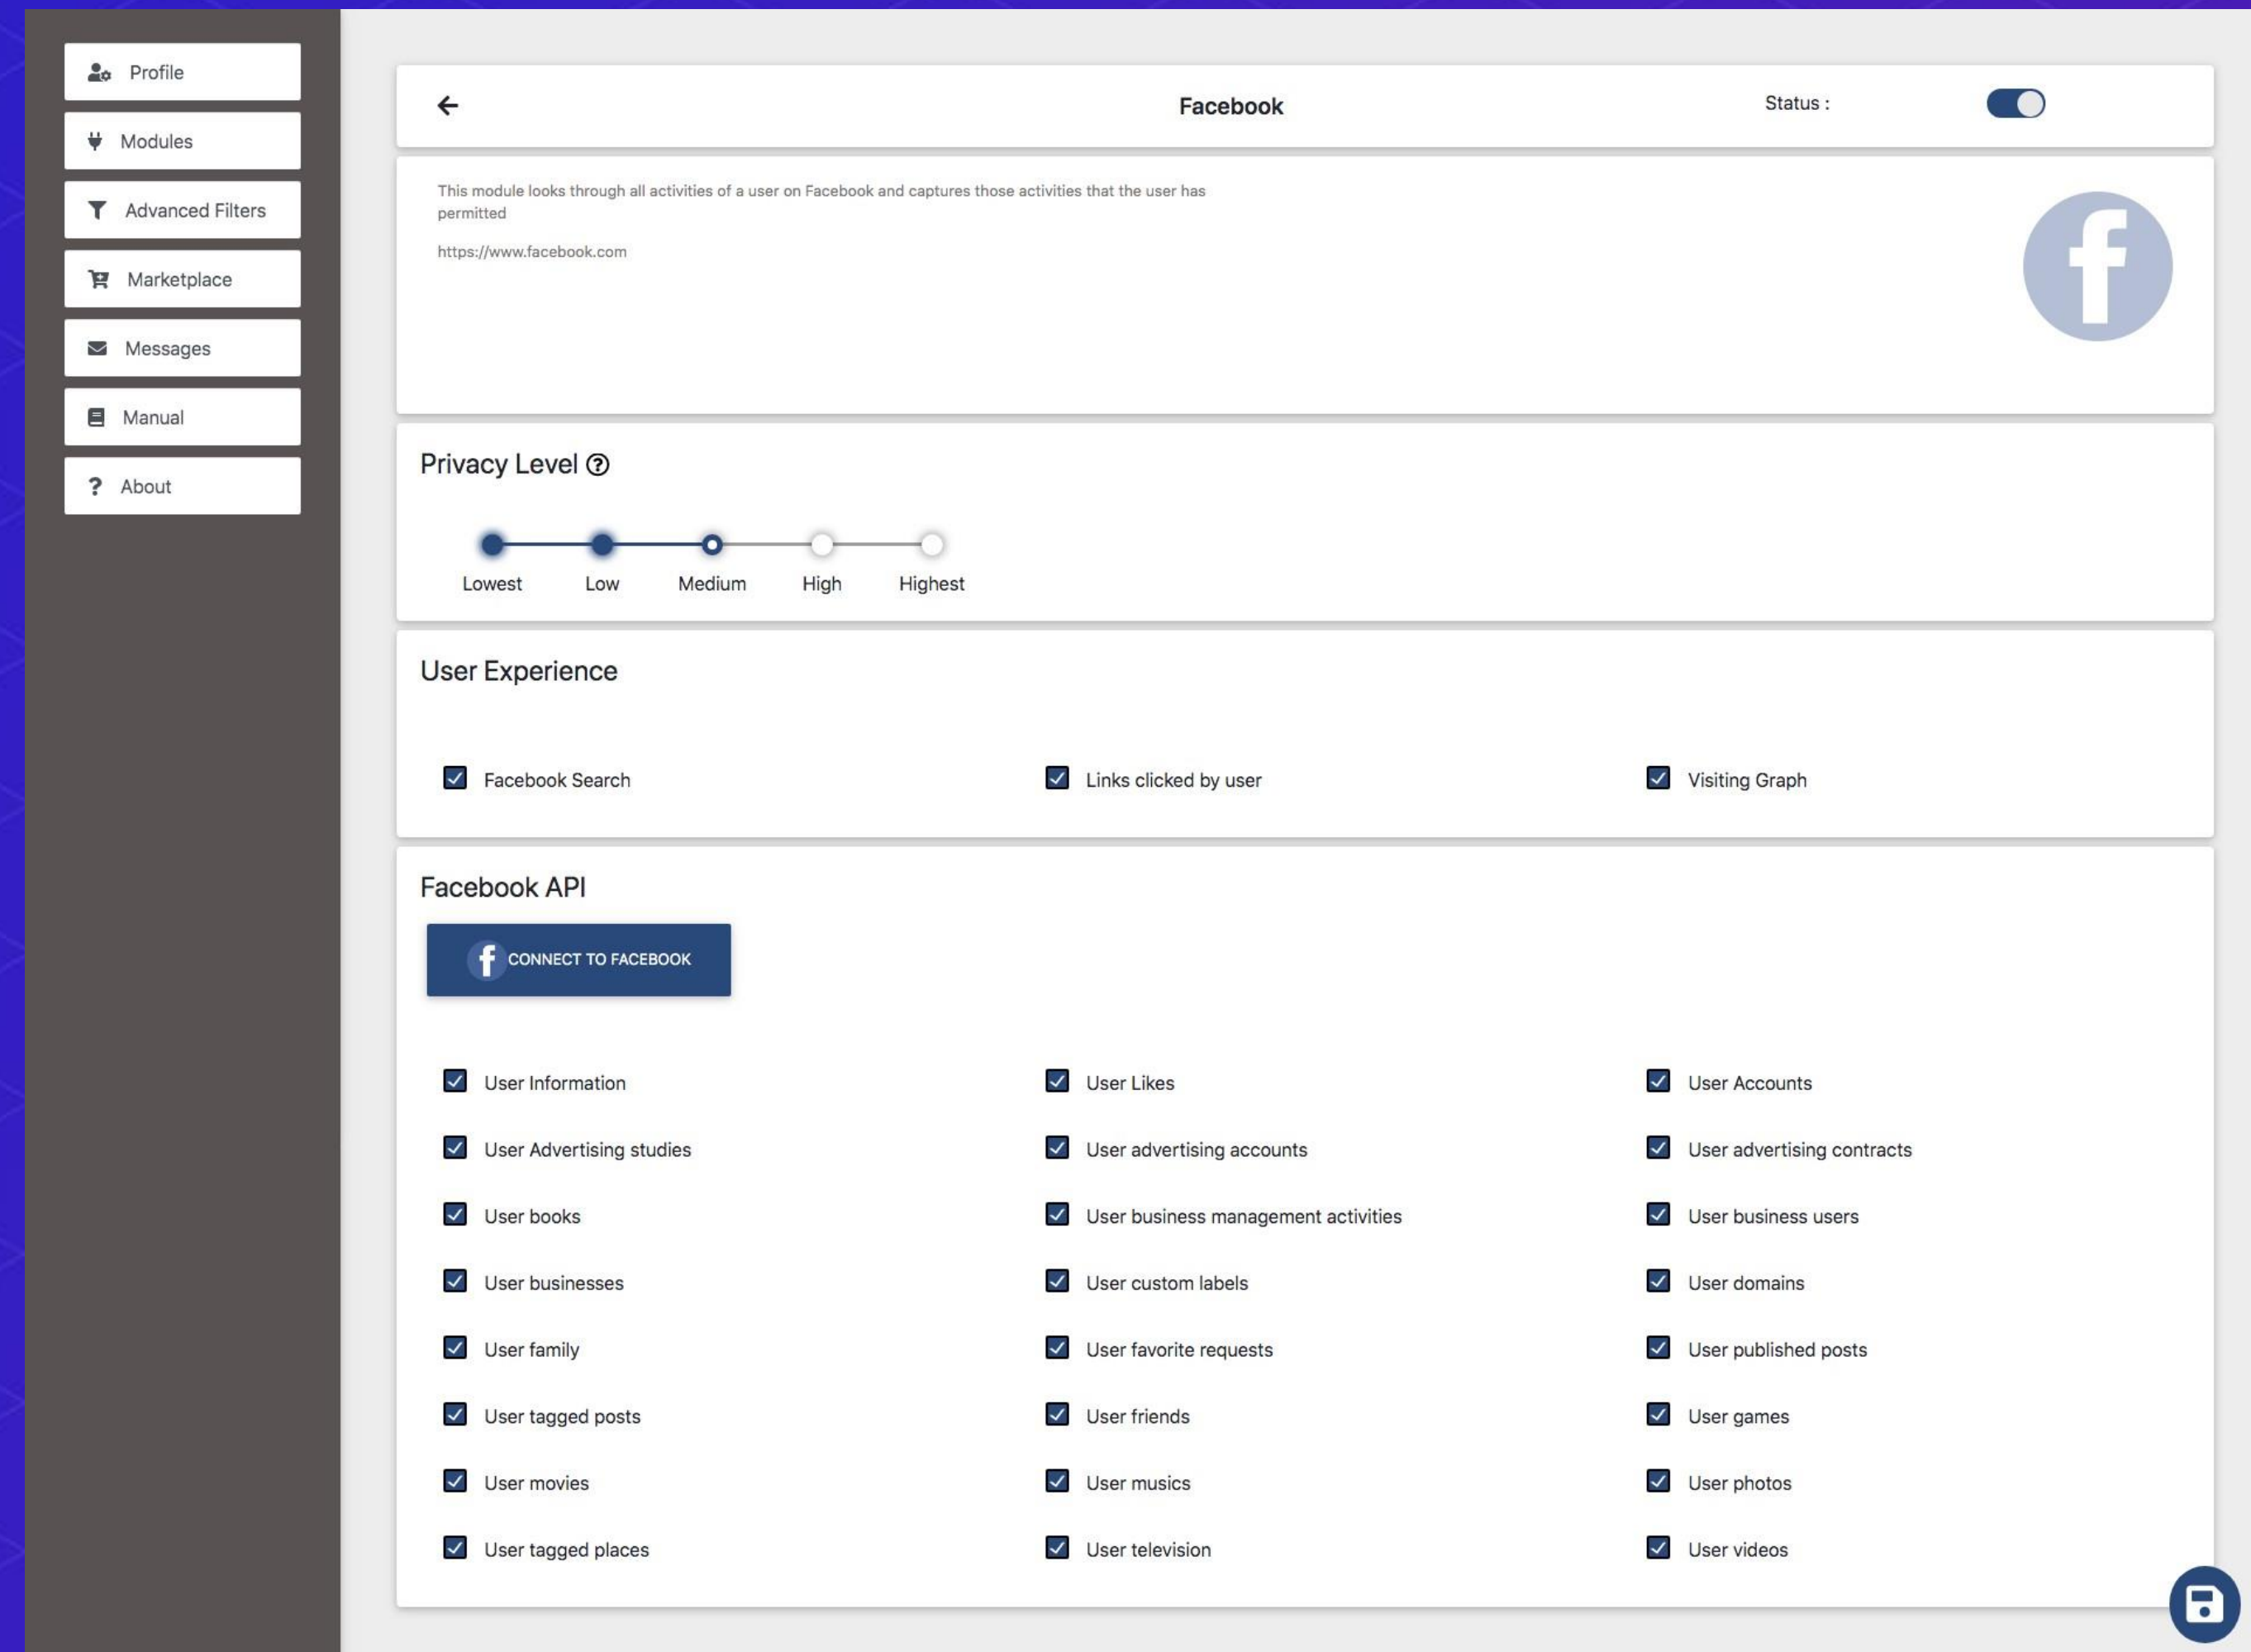

- Dedicated neutral infrastructure ✔
- Offering can be publicly marketed and have a wider reach ✔
- Fair monetisation with real user consent and revenue sharing ✔

In some industries, the data can be more lucrative than the original business

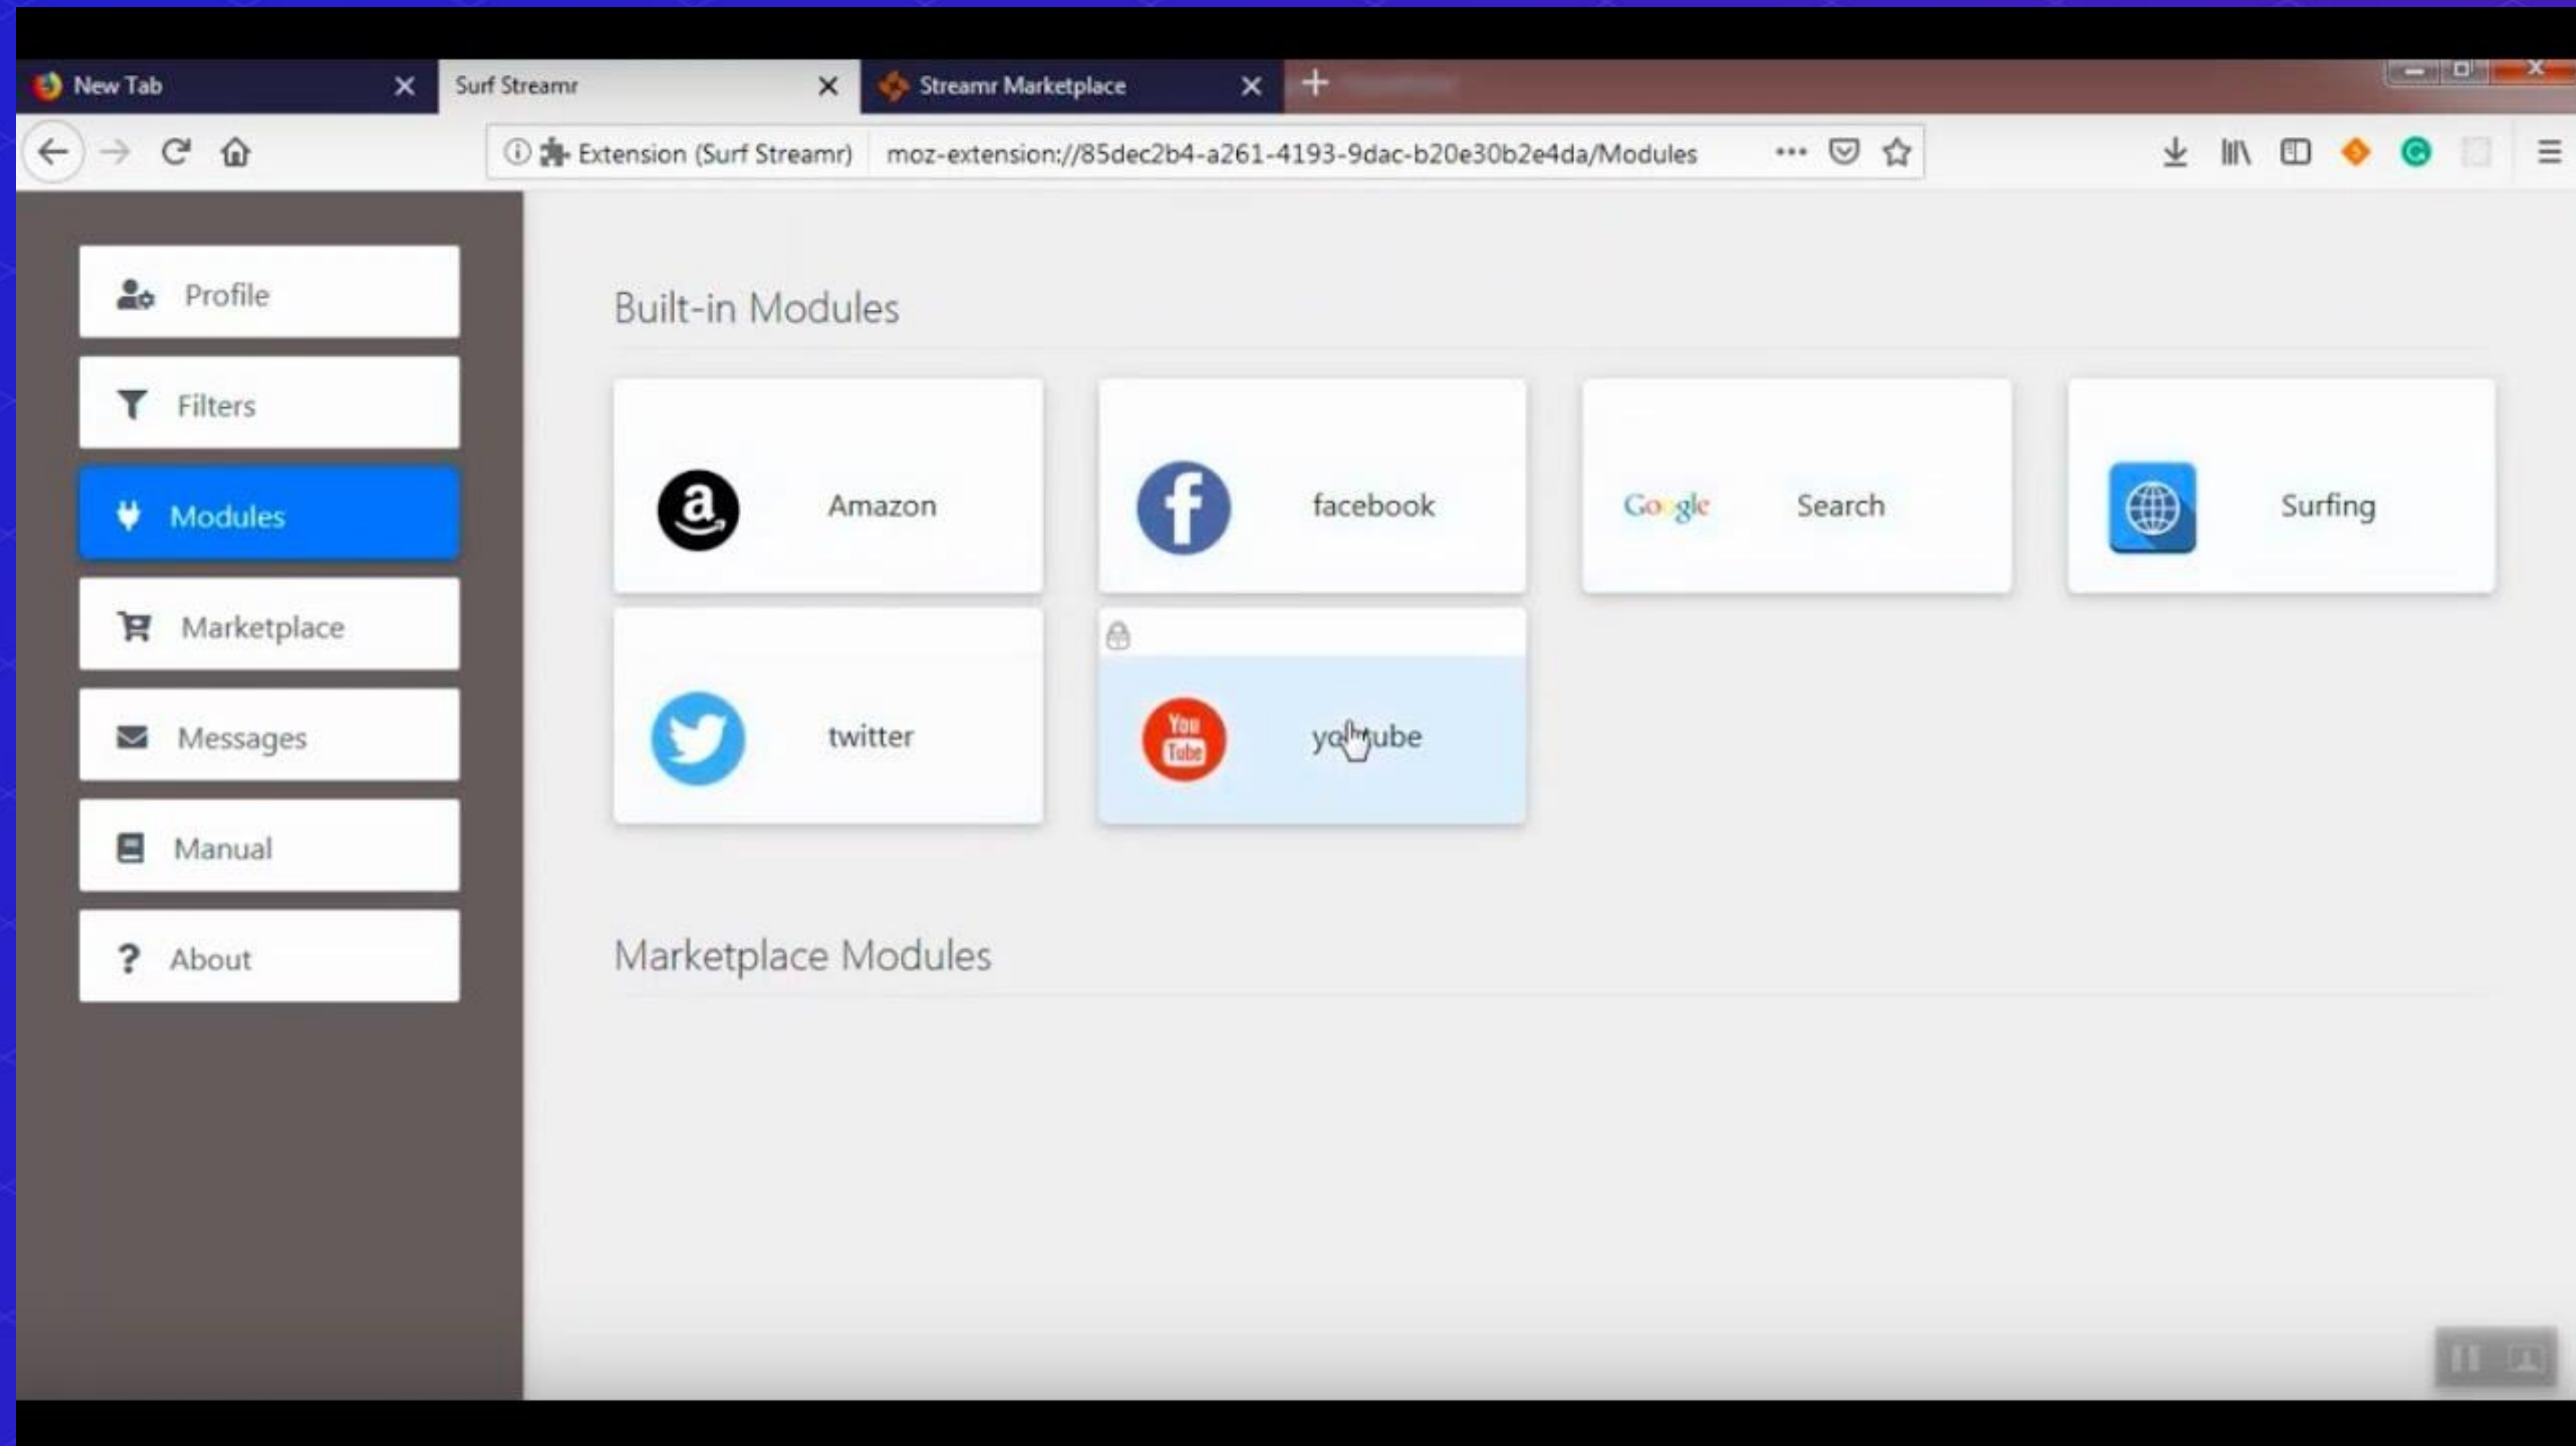

Community Product Reference - Swash

- Browser plugin for people to monetize their browsing data (Firefox, Chrome, Microsoft Edge)
- Community product integration developed by independent team
- Users can choose their privacy level via slider

Modules to collect data from different platforms

Data Union Reference – Tracey

- Collaboration with Union Bank and WWF in Philippines
- Crowdsourced fish catch data from fisherfolk in the Philippines
- Supports sustainable fishing
- Fisherfolk build accurate credit scores by inputting verified catch and trade data
- Fishermen get access to affordable microloans from Union Bank

Early UI mockups for the Tracey mobile app
